Laravel 8.x Toastr Notifications Example Tutorial

Posted By [Mahedi Hasan \(https://www.codecheef.org/author/mahedi-hasan\)](https://www.codecheef.org/author/mahedi-hasan) Category [Framework \(https://www.codecheef.org/article/category/framework\)](https://www.codecheef.org/article/category/framework) Sub-category [Laravel 5 \(https://www.codecheef.org/article/subcategory/laravel\)](https://www.codecheef.org/article/subcategory/laravel)
August 10, 2019

the message could be type of info, success, warning or error

When a user signs up on your website or performs an action that needs a notification, a good option is to use the ToastrJS library.

But in this tutorial i will use this packages (<https://github.com/brian2694/laravel-toastr>) (<https://github.com/brian2694/laravel-toastr>) to complete Toastr notification system in our laravel app. You can read this documentation also. i thinks it is pretty awesome and simple also easy to customize visualization.

In this tutorial i will show you how to use toast message in laravel 8. Toastr is awesome plugin to show awesome messages to user. So let's start how to add toastr js in laravel application.

Toastr Example in Laravel

Step 1 : Install toastr

Run the below command to install **Toastr notification package**

```
composer require brian2694/laravel-toastr
```

That's it! The package is auto-discovered on 5.5 and up!

Laravel <= 5.4

Add the service provider to **config/app.php**

```
Brian2694\Toastr\ToastrServiceProvider::class,
```

Optionally include the Facade in config/app.php if you'd like.

```
'Toastr' => Brian2694\Toastr\Facades\Toastr::class,
```

Options

You can set custom options for customizing your notification view. Run:

```
php artisan vendor:publish
```

to publish the config file for toastr. You can see **toastr's documentation** (<http://codeseven.github.io/toastr/demo.html>) to custom your need.

Dependencies

jQuery toast (<https://github.com/CodeSeven/toastr>), you need to add css and js to your html. So now add those following code to your **master template file before closing the body tag**.

```
<script src="http://cdn.bootcss.com/jquery/2.2.4/jquery.min.js"></script>
<script src="http://cdn.bootcss.com/toastr.js/latest/js/toastr.min.js"></script>
{!! Toastr::message() !!}}
```

and before closing the head tag, paste the following link.

```
<link rel="stylesheet" href="http://cdn.bootcss.com/toastr.js/latest/css/toastr.min.css">
```

PHP Copy

now add the below code to your controller like below.

```
namespace App\Http\Controllers\Admin;

use App\Http\Controllers\Controller;
use Illuminate\Http\Request;
use Brian2694\Toastr\Facades\Toastr;

class PostController extends Controller
{

    public function store(Request $request)
    {
        //Your code goes here

        Toastr::success('Post added successfully :)', 'Success');
    }

}
```

Hope it will work for you.
